

VP packagers Changes Given on 29-05-2025 :

1. Get Color Names/Item Names in Job Specification screen.
2. Get Output form Dropdown in Job Specification instead of Order Form Screen.
3. Reserve the stock for each order form separately for that. Don't show whole stock as available.
4. Show how much weight needed for that order form which is given in Job Specification.
5. Don't directly show material to be ordered instead show a button and also don't ask size and micron, get it from Job Specification.
6. Show Printing Output input box as the count of variety of colors/items in Printing Screen.
7. While Continuing, ask a dropdown for which order form this order is continuing and also in the continued order show from which this order is continued.
8. Only one size should be continued in each printing and also a size can continue across various order forms.
9. Ask for which polyster size and for which weight the lamination have to be done and the balance size and weight should be stored as printed polyster separately, these printed polyster will be laminated later as separate output (Partial Lamination).
10. Lamination materials custom sizes will be added directly in lamination screen after the printing which is not got in order form. Show sizes which have stock.
11. In Slitting Screen, the output weight will be separated according to the variety of colors/items. So below the table show separate input boxes.
12. Also in Cutting Screen, the output weight will be separated based on bundles. So below the table show separate input boxes with input append button.
13. After Clicking Submit, Don't redirect to listing screen, forward to next step.

Corrections :

1. Change the job details while onchanging the job dropdown.
2. Don't add printing balance to inward in stock report.
3. Stock Report -> Film size and micron details is not showing.
4. Change label -> Pouch weight to Cutting Weight.
5. Maintain separate table for each process in order to maintain properly.
